A. 1st Step.

Get bond_id wise quantity from tbl_order_details

Objective : 'OrderStatus' => 3 and of order type= 10 -> Insert data into tbl_mat_bond.ActQt

URL: <https://os.softworksol.com/order/OrderStatusList/index>

Controller: OrderStatusList.php

Line No - 888

Similar procedure followed by unit_conversion (line no-871)

Conditions:

tbl_order_details -> sum(Quantity) as **sumqt**

join tbl_material

where order_type_id=10 (join tbl_order_summery to get order_type_id)

and tbl_material.tbl_mat_bond_id !=0

group by tbl_mat_bond_id

If above condition true

and **tbl_mat_bond.(AlloctQt-ActQt) as bondqt >= sumqt**

then, bondqt add on into tbl_mat_bond.ActQt

else, sumqt add on into tbl_mat_bond.ActQt

B. 2nd Step.

Objective : Generate a view

URL Formet: <https://os.softworksol.com/mrp/ReqTimeCost/cal>

DB Table : tbl_mat_bond

1	2	3	4	5
Bond Name	HS Code	Allocate Qt	Actual Qt	Balance

[1 to 4] => tbl_mat_bond

5 => [3-4]

C. 3rd Step.

Print - Order Type: Supplier's PI (57)

Objective : Print either tbl_material.MaterialName or tbl_mat_bond.BondName
& tbl_mat_bond.Hscode

table join : tbl_order_details, tbl_order_summery, tbl_material , tbl_mat_bond

URL: <https://os.softworksol.com/order/AddOrderList/printcpy/4504/57>

Condition:

tbl_order_details.tbl_material_id -> sum(Quantity)

tbl_order_summery.order_type =57

tbl_material.tbl_mat_bond_id !=0

group by ContNo

If this true, print tbl_mat_bond.BondName and Hscode

else tbl_material.materialName
